### TEST COMMENTS:

*This plot was planted in strip-till. At planting, there was adequate moisture, but emergence was delayed a week longer than usual due to cold soil conditions. Timely rains, paired with no-till conditions, may have helped this plot through the worst of the dry summer. While harvesting the plot, there was significant lodging noticed among some of the varieties making for a difficult time picking up all the cobs; A pinch test showed weak stalks on those with severe lodging. Steve said the hybrid he planted around the plot did very well, averaging around 230 bpa.*
