### TEST COMMENTS:

*This is a very flat and uniform plot site. The corn was standing very well at harvest with very little lodging noted. Brody said that the rains came just in time during the growing season. The front range of the plot, the early-season test, had weaker looking corn from the drought stress. It was a good plot, and thank you to Rod and Brody for hosting again this year. The early-season test had high yield variation due to drought stress is not reported.*
